March, 2023.**

Executive summary

The provision of safe and accessible water supply to the rural/underserved communities in Ebonyi State is undoubtedly one of the most important socio-economic and developmental necessity required for improvement of life. Ebonyi State is mostly composed of rural communities and a greater proportion of the communities are underserved and suffer from lack of safe and easily accessible sources of water. The State government has made some efforts to provide bore holes in a number of these communities, but this is hardly enough. Therefore, the efforts by public spirited individuals or groups eg., **Samuel Omogo Foundation**, to augment what the government is doing to provide water to rural dwellers in Ebonyi state is not only highly commendable but deserve to be properly documented.

The essence of this report is to present the outcome of the needs assessment study of water availability in some rural communities of Ebonyi State especially in nine Local Government Areas of Ebonyi State with majority of the communities in Ohaukwu LGA. The report is designed to provide the needed insight into the understanding of the water situation in the target communities with the view to initiating the process that will lead to the provision of water to the rural folks.

Over 80% of the rural communities assessed are located in Ohaukwu LGA. The following water availability needs assessment methodology/procedure was employed in the needs assessment survey of water availability in selected 82 communities mainly in Ohaukwu LGA with others in others LGAs (i). Obtaining list of selected communities for borehole drilling from the **Samuel Omogo Foundation**, (ii). Contacting the proposed well managers/committee, (iii). Acceptance of formal application from the well managers/committee; (iv). Visitation of the different site (v) Obtaining pictures of sources of water supply in target communities, (v) Interviewing the well managers/community members (vi). Obtaining the photograph of each well manager/committee, (vii). Presentation of the findings.

The summary of key findings are as follows:

1. Water scarcity is clearly a very serious problem in all the communities listed.
2. The communities all have sizable population with average household comprising up to 10persons.
3. The main sources of water supply are pond, rivers and streams and these are about 1hr to as much as three hours of walking distance away from the villages.
4. Majority of the members of the communities access the water sources on foot.
5. The water obtained from all the sources were described as unacceptable.
6. The women and the children are mainly responsible for fetching of the water in all the communities.
7. All the water sources dry up towards the beginning of the dry season especially around November-April each year.
8. The major water-borne diseases suffered by the people as a result of water scarcity include: Typhoid, Cholera and dysentery.
9. Majority of the water sources are being contaminated by sewage (faeces and urine), animal dung, refuse and plat debris and leaves. The possibility of chemical contaminants cannot be ruled out as some people wash clothes and other items capable of polluting the water sources right inside the water.
- 10.The major risks reported include snake bites, attack by hoodlums and thieves, rape of women and girls, molestation by wild animals including monkeys, children going to school late and with dirty uniforms and fighting at the water source.

11. All the managers/committee members acknowledged that the borehole will greatly alleviate the suffering of the people, reduce exposure to disease causing water-borne infectious agents and enhance personal hygiene.
12. All the managers/committee members noted that adequate arrangements have been made to manage and maintain the boreholes after they are provided, including constituting a borehole management committee, providing security to monitor and regulate the usage of the boreholes.

Background information on Ebonyi State

Ebonyi State is one of the states in the South-eastern Nigeria. It is the youngest state in the South-eastern Nigeria and is made up of 13 Local Government Areas (LGAs). Known as the “Salt of the Nation” because of its large salt deposits, Ebonyi State is one of the 36 states in Nigeria. It was created in 1996, making it one of the youngest states in Nigeria. The State shares a border with Benue State to the North, Enugu State to the west, Imo and Abia States to the south and Cross River State to the east.

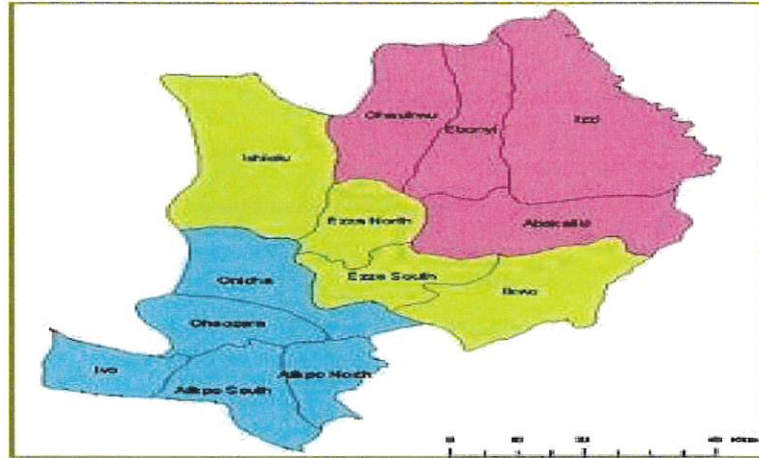

Map of Nigeria with Ebonyi State highlighted in orange

The State capital and largest town is Abakaliki. The second largest town is Afikpo. Other towns are Ikwo, Izzi, Onicha, Edda, Onueke, Ezzamgbo, Nkalagu, Uburu, Ishiagu, Amasiri and Okposi. For administrative purposes, Ebonyi State is divided into three Senatorial Zones, each represented by a Senator at the National Assembly, and six Federal Constituencies, each represented by a Member of the House of Representatives also at the National Assembly.

The three Senatorial Zones are:

- Ebonyi North – comprising Abakaliki, Ebonyi, Ishielu, Ohaukwu and Izzi LGAs
- Ebonyi Central – comprising Ikwo, Ezza North and Ezza South LGAs
- Ebonyi South – comprising Afikpo North, Afikpo South, Ivo, Ohaozara and Onicha LGAs

Map showing Ebonyi Local Government Areas and Senatorial Zones

The state is also divided into thirteen local government areas (LGAs), namely: (1) Abakaliki, (2) Afikpo North, (3) Afikpo South, (4) Ebonyi, (5) Ezza North, (6) Ezza South, (7) Ikwo, (8) Ishielu, (9) Ivo, (10) Izzi, (11) Ohaozara, (12) Ohaukwu and (13) Onicha.

Ebonyi State is situated between latitudes 5°40' and 6° 54'N and longitudes 7°30'and 8°30'E, it is bounded to the north by Benue State, to the east by Cross River State, to the south by Abia State and to the west by Enugu State. Geopolitically, it belongs to the South East Zone of Nigeria but lies entirely in the Cross River Plains. Its elevation is between 125 and 245 meters above sea level, mainly of broad clay and shady basins fringed by narrow outcrops of sandstone, limestone and other rock formations. Towards the southeast border, the landscape abuts onto the hilly country of the Okigwe-Arochukwu axis.

The population of the State was put at 2,176,947 by the 2006 census. With a growth rate of 3.5% per annum, the State has a projected population of 2,565,184 by the end of 2012. Males constitute 48.9% while females constitute 51.1% of the population. The average population density is 286 persons per square km but is higher in the urban areas. A further breakdown of the population shows that Infants (under one year) old make up 4%, the U5 children 20% and women of child bearing (WCBA) (15-49 years) make up 22% of the population. Ebonyi is mainly rural and so, about 75% of the population lives in the rural areas.

The people of Ebonyi State are predominantly farmers and traders. The main crops produced in the State are rice, yam, palm produce, cocoa, maize, groundnut, plantain, banana, cassava, melon, sugar cane, beans, fruits and vegetables. Fishing is also carried out in Afikpo. The state is blessed with mineral resources such as lead, limestone, zinc and marble. Ebonyi is called “the salt of the nation” for its huge salt deposit at the towns of Okposi and Uburu.

In the industrial sector, the State has several food processing factories including dozens of rice mills, many quarry factories, a fertilizer blending plant, one of Nigeria’s largest poultries (Nkali

Poultry) and one of Nigeria's foremost cement factories (the Nigerian Cement Company at Nkalagu). Educationally, the State boasts of a university in Abakaliki (Ebonyi

State University, popularly known as EBSU), a federal polytechnic (Akanu Ibiam Federal Polytechnic in Unwana near Afikpo), one college of education in Ikwo, a college of agriculture in Ishiagu and several secondary and primary schools spread across the various towns and villages. Ebonyi students consistently rank high in educational tests and other achievement scores.

In the health sector, Ebonyi has The Federal Teaching Hospital, and the National Obstetrics Fistula Centre – both in Abakaliki. The State also has general hospitals located in various parts of the State. These are complemented by several private hospitals and clinics in various towns and villages. Tourist attractions in the State include Ndibe Beach in Afikpo, the salt lakes in the towns of Okposi and Uburu, and Ishiagu Pottery Works in Ishiagu. Ebonyi State has a rich cultural heritage. This is expressed in the many colorful cultural dances, folklore and artwork, some of which have attracted national and international attention. The popular Nkwa Umuagbogho Dance Group of Afikpo has won several national and international merit awards. Other popular dance groups include the official State Government cultural dance group, Nkwa Nwite of Afikpo, Ojanyalere of Amasiri and many more.

Status of water availability in rural communities of Ebonyi State

The provision of safe and accessible water supply to the rural/underserved communities in Ebonyi State is undoubtedly one of the most important socio-economic and developmental necessity required for improvement of life. Ebonyi State is mostly composed of rural communities and a greater proportion of the communities are underserved and suffer from lack of safe and easily accessible sources of water. Most of the communities' inhabitants trek long distances to obtain water and many of the sources of water are surface water and hardly safe for human consumption. This is why many rural communities constantly experience outbreaks of water borne preventable diseases like cholera, dysentery, typhoid fever, amoebiasis, urinary schistosomiasis, giardiasis, hepatitis A & E, cryptosporidiosis etc.

Water is also essential for house needs and access to safe drinking water and sanitation is critical to maintaining health particularly for children. It is estimated that about 3900 children die every day from water borne diseases (World Health Organization, 2004). In Ebonyi State, the situation is disturbing where in 2003 and 2004, a total of 11,685 diarrhea cases with 36 deaths were reported, a total of 126 guinea worm cases were equally reported, while a total of 207 cholera cases with 16 deaths and a total of 194 typhoid related diseases with 11 death were further reported, and those mostly affected were children (Ministry of Health Ebonyi State, 2005).

Apart from these microbiological agents, there is also increasing report of contamination of surface water by dangerous chemical agents and pesticides. Because of the increasing use of agricultural pesticides and herbicides in many rural areas of Ebonyi State, the probability of contamination of surface water becomes dangerously high as a result of run-offs.

Therefore, Ebonyi rural dwellers are constantly at the risk of severe health problems resulting from drinking or using microbial and chemical contaminated surface water. There is also the

problem of severe suffering and burden on the women as they not only trek long distances to obtain water but also have to wait a very long time for their turn at the only source of relatively safe water.

In addition to this school children often stay away from school because their parents send them in search of water and the lack of water has also contributed to them coming to school with dirty school uniforms. And in their schools the lack of water is also a major problem towards promoting personal cleanliness including hand hygiene.

The State government has made some efforts to provide bore holes in a number of these communities, but this is hardly enough. Therefore, the efforts by public spirited group eg. Global Rotary Foundation, to augment what the government is doing to provide water to rural dwellers in Ebonyi state is not only highly commendable but deserve to be properly documented.

The essence of this report is to present the outcome of a needs assessment study of water availability in some rural communities of Ebonyi State especially in Ohaukwu LGA. The report is designed to provide the needed insight into the understanding of the water situation in the target communities with the view to initiating the process that will lead to the provision of water to the rural folks.

As over 95% of the rural communities assessed are located in Ohaukwu LGA, it is important to provide information about the Ohaukwu LGA. The information is derived from the Martins Library and available at <http://martinslibrary.blogspot.com.ng/2014/11/ohaukwu-local-government-area.html>

Water availability needs assessment methodology

The following procedure was employed in the needs assessment survey of water availability in selected 82 communities mainly in Ohaukwu LGA with others in neighboring LGAs.

- 1. Obtaining list of selected communities for borehole drilling:** The list of 82 communities was obtained from Abakaliki Rotaty Club. The list contained the selected communities as well as the names, and phone numbers of the proposed well managers.
- 2. Contacting the proposed well managers/committee:** All the well managers/committees listed were contacted via phone call over a period of five days. Some challenges were encountered in linking up with many of them due to limited network services in the rural communities where many of them reside. However, all of them were reached.
- 3. Submission of formal application from the well managers/committee:** All the contacted proposed well managers submitted their formal application indicating their interest in having a borehole sited in their respective communities. They justified why they it is necessary for them to be provided boreholes. All the applications were signed by the well managers indicating their need for the borehole and how it will benefit their communities.
- 4. Visitation of the site and interview:** All the 90 sites for the boreholes were visited in order to identify the needs of each community. The well managers and people were also interviewed.

5. Pictures of sources of water supply in target communities: Three pictures were taken on each well location: one showing their community members fetching water at the various water supply locations eg., dams, pond, rivers, streams, caves etc. 2. Pictures of the possible sites they all have agreed that the borehole can be sited. 3. The picture of the wells manager in order to have a record of their identities.

6. Key informant interview: All the well managers were met by the Needs Assessment Team led by Prof. C.J Uneke, the Project Consultant. All the Managers and a few of their companions were interviewed using a data collection instrument which contained the following information:

- (i). Name/occupation/phone no. of proposed borehole manager
- (ii). What is the estimated population size/number of households of your community
- (iii). What is the main source of water supply in your community?
- (iv). How much quantity of water is required per household per day in your community?
- (v). What is the name of the source of water supply?
- (vi). How does majority of the community members get to the source of water supply? Foot, vehicle, motorcycle, bicycle
- (vii). How far/how long does it take to reach the source of water supply from your community?
- (viii). How is the quality of the water? Excellent, good, acceptable, unacceptable.
- (ix). Who are those that normally fetch water for household use in your community?
- (x). How long does it take to reach someone's turn at the source of water?
- (xi). How long Is the source of the water supply available in a year?.
- (xii). What are the water-borne diseases suffered by members of your community?.
- (xiii). What are the possible contaminants of at the source of water supply?.
- (xiv). What challenges/risks do people face at the source of water supply?.
- (xv). What are other negative effects of water scarcity in your community?.
- (xvi). How can the provision of borehole benefit your community?...
- (xvii). What plans does your community have to maintain the borehole?...

7. Presentation of the findings: Each community profile was presented separately on the assessment form with the picture of the proposed well manager and the source of water supply for each community. The profile is presented below.

Summary of key findings

1. Water scarcity is clearly a very serious problem in all the communities listed.
2. The communities all have sizable population size with average household comprising up to 10 persons.
3. The main sources of water supply are pond, rivers and streams and these are about 1hr to as much as three hours of walking distance away from the villages.
4. Majority of the members of the communities access the water sources on foot.
5. The water obtained from all the sources were described as unacceptable.
6. The women and the children are mainly responsible for fetching of the water in all the communities.
7. All the water sources dry up towards the beginning of the dry season especially around November each year.
8. The major water-borne diseases suffered by the people as a result of water scarcity include: Typhoid, Cholera and dysentery.
9. Majority of the water sources are being contaminated by sewage (faeces and urine), animal dung, refuse and plant debris and leaves. The possibility of chemical contaminants cannot be ruled out as some people wash clothes and other items capable of polluting the water sources right inside the water.
10. The major risks reported include snake bites, attack by hoodlums and thieves, rape of women and girls, molestation by wild animals including monkeys, children going to school late and with dirty uniforms and fighting at the water source.
11. All the managers acknowledged that the borehole will greatly alleviate the suffering of the people, reduce exposure to disease causing water-borne infectious agents and enhance personal hygiene.
12. All the managers noted that adequate arrangements have been made to manage and maintain the boreholes after they are provided, including constituting a borehole management committee, providing security to monitor and regulate the usage of the boreholes.

	Community 1	
1	Name of LGA	Abakaliki
2	Name of village/community	Okpaugwu Abakaliki
3	Proposed Location of the borehole	SJGS St. John's Community
4	Name/occupation/phone no. of proposed borehole manager	Rev. Sr. Jacinta Apiukwa/Social work/09063986667
5	Name/occupation/phone no. of proposed borehole assistant manager	09079224627
6	What is the estimated population size/number of households of your community?	100-500
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Rain Water and Well Water
8	How much quantity of water is required per household per day in your community?	2000 liters
9	What is the name of the source of water supply?	Well
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot
11	How far/how long does it take to reach the source of water supply from your community?	5 minutes
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Acceptable
13	Who are those that normally fetch water for household use in your community?	Sisters/Parishioners
14	How long does it take to reach someone's turn at the source of water?	45 minutes
15	How long is the source of the water supply available in a year?	6 months
16	What are the water-borne diseases suffered by members of your community?	Typhoid Fever, Gastroenteritis, skin infection
17	What are the possible contaminants of the water sources in your community?	Insects, worms, leaves
18	What challenges/risks do people face at the source of water supply?	Health problem, scarcity of water
19	What are other negative effects of water scarcity in your community?	Economic loss
20	How can the provision of borehole benefit your community?.	Improves peoples health and well being
21	What plans does your community have to maintain the borehole?	By safe guiding it and keep the water clean
		
	Well Management Committee:	Community members at source of water supply for the community

Community 2

	Community 2	
1	Name of LGA	Ohaukwu
2	Name of village/community	Ohulo
3	Proposed Location of the borehole	Village Area
4	Name/occupation/phone no. of proposed borehole manager	One Sabastine /Civil Servant/08066662203
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	400 and above
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Pond Pond
8	How much quantity of water is required per household per day in your community?	65000 liters
9	What is the name of the source of water supply?	Nsororo pond
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot
11	How far/how long does it take to reach the source of water supply from your community?	2 kilometer
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Elderly women
14	How long does it take to reach someone's turn at the source of water?	Almost a whole day
15	How long is the source of the water supply available in a year?	At the late Rains
16	What are the water-borne diseases suffered by members of your community?	Guinea Worm, cholera and dysentary
17	What are the possible contaminants of the water sources in your community?	Animal Refuse sewage disposal
18	What challenges/risks do people face at the source of water supply?	Guarelling , fighting and disease contamination
19	What are other negative effects of water scarcity in your community?	Diarrhea death and cough
20	How can the provision of borehole benefit your community?.	Reduction in disease, control spread, promotion of good hygienic
21	What plans does your community have to maintain the borehole?	Esterblisment of people to man it, standing free will donation
		
	Well Management Committee:	Community members at source of water supply for the community

Community 3

1	Name of LGA	Ohawkwu LGA
2	Name of village/community	Alasakor Village NduloOkposhiehekwa
3	Proposed Location of the borehole	Village Town Hall Area
4	Name/occupation/phone no. of proposed borehole manager	Mr. Joseph I.Odo Civil Servant/08067587008,09018606043
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	500 to 600
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Rain water Stream and pond water
8	How much quantity of water is required per household per day in your community?	100 to 120 liters
9	What is the name of the source of water supply?	Alisakor pound water
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Bicycle and foot
11	How far/how long does it take to reach the source of water supply from your community?	1 ¹ / ₂ hours
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and youth
14	How long does it take to reach someone's turn at the source of water?	45 minutes
15	How long is the source of the water supply available in a year?	7 months
16	What are the water-borne diseases suffered by members of your community?	
17	What are the possible contaminants of the water sources in your community?	Guinea, worm, colitis, diarrhoea
18	What challenges/risks do people face at the source of water supply?	Meeting some dangerous animals snake bites tiredness after tracking lateness to work
19	What are other negative effects of water scarcity in your community?	Constant sickness wristlessness, Lack of progress, untimely death
20	How can the provision of borehole benefit your community?.	The community shall be free from waterborne disease The shall be healthy and progressive
21	What plans does your community have to maintain the borehole?	They have already set up committee for the maintenance of it To insure that the surrounding is kept clean To make sure that children do not play with it If drilled proper care shall take to maintain it
		
Well Management Committee:		Community members at source of water supply for the community

Community 4

1	Name of LGA	Ohaukwu
2	Name of village/community	UrueveneAmaechi
3	Proposed Location of the borehole	OkwerikeUruevene
4	Name/occupation/phone no. of proposed borehole manager	Sunday Nnabuike/Farmer/08078860195
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	Over 200
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	From Pond (Okpuru)
8	How much quantity of water is required per household per day in your community?	250 liters
9	What is the name of the source of water supply?	OkpuruNdieguOnwe
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot and Bicycle
11	How far/how long does it take to reach the source of water supply from your community?	2 miles
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women/Children
14	How long does it take to reach someone's turn at the source of water?	45 minutes
15	How long is the source of the water supply available in a year?	During Rain Season
16	What are the water-borne diseases suffered by members of your community?	Stomach Problem
17	What are the possible contaminants of the water sources in your community?	Guinea Worm
18	What challenges/risks do people face at the source of water supply?	Time Delay And Fighting for Turn at the Pond
19	What are other negative effects of water scarcity in your community?	Hunger and Inability to wash our cloths sometimes
20	How can the provision of borehole benefit your community?.	Easy access to water and they will be lesser diseases
21	What plans does your community have to maintain the borehole?	Our community will set a committee to monitor the borehole, also borehole in a safer location where nobody will vandalis it
		
	Well Management Committee:	Community members at source of water supply for the community

Community 5

1	Name of LGA	Ohaukwu
2	Name of village/community	NdiaguNwefuruNdiaguEchi
3	Proposed Location of the borehole	NdiaguNwefuru
4	Name/occupation/phone no. of proposed borehole manager	Mr. Godwin Omeze/Farmer /08104162599
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	86
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Stream Stream
8	How much quantity of water is required per household per day in your community?	100 liters
9	What is the name of the source of water supply?	NwefuruMkpokooEkwu
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot and Motorcycle
11	How far/how long does it take to reach the source of water supply from your community?	6km
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Children/Women
14	How long does it take to reach someone's turn at the source of water?	2 hours
15	How long is the source of the water supply available in a year?	July- November
16	What are the water-borne diseases suffered by members of your community?	Cholera, Diarrieah
17	What are the possible contaminants of the water sources in your community?	Plant, animals
18	What challenges/risks do people face at the source of water supply?	Snake bite, late preparation of foods, mosquito bites
19	What are other negative effects of water scarcity in your community?	Thifts among village members
20	How can the provision of borehole benefit your community?.	It will cure the negative effect and disease mentioned above from spreading
21	What plans does your community have to maintain the borehole?	Adequate security is placed especially from the members of the youth from the village
		
	Well Management Committee:	Community members at source of water supply for the community

Community 6

1	Name of LGA	Ohaukwu
2	Name of village/community	AzueguNduloOkposhiEhekli
3	Proposed Location of the borehole	Azuegu Village
4	Name/occupation/phone no. of proposed borehole manager	Agbo James Enyi/Farmer/08066833263
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	200
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Pond Stream
8	How much quantity of water is required per household per day in your community?	One Barrel
9	What is the name of the source of water supply?	Pond/Stream
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot and Bicycle
11	How far/how long does it take to reach the source of water supply from your community?	10 kilometres
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Male, female & child
14	How long does it take to reach someone's turn at the source of water?	One Hour
15	How long is the source of the water supply available in a year?	6 months
16	What are the water-borne diseases suffered by members of your community?	Guinea Worm, River Blindness e.t.c
17	What are the possible contaminants of the water sources in your community?	Micro cophicorangisms
18	What challenges/risks do people face at the source of water supply?	Beilache problem, Guinea work
19	What are other negative effects of water scarcity in your community?	Unable to drink and cook food, wash clothes, take bath E.t.c
20	How can the provision of borehole benefit your community?.	It will prevent scarcity of water, problem of disease
21	What plans does your community have to maintain the borehole?	The committee will make sure that the environment is kept clean, replacement of worn out boots
	 <p>Well Management Committee:</p>	 <p>Community members at source of water supply for the community</p>

Community 7

1	Name of LGA	Ohaukwu
2	Name of village/community	NdiuloUmusokeAmoffia
3	Proposed Location of the borehole	School premises(NdiuloumusokeAmoffia)
4	Name/occupation/phone no. of proposed borehole manager	Igwe, Godwin Akpu
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	400=
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	(I) Well and purchase of Satchet water (ii) Well
8	How much quantity of water is required per household per day in your community?	120litres
9	What is the name of the source of water supply?	Well in the school compound
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	By foot
11	How far/how long does it take to reach the source of water supply from your community?	Within the school but doesn't last and not safe for drinking
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Class monitors and those appointed
14	How long does it take to reach someone's turn at the source of water?	20 to 30 minutes
15	How long is the source of the water supply available in a year?	Up to the end of november
16	What are the water-borne diseases suffered by members of your community?	Typhoid, Cholera, Diarrhea
17	What are the possible contaminants of the water sources in your community?	Sewage, Disposals, the pupils throw sticks, rags into the well
18	What challenges/risks do people face at the source of water supply?	Wastage of time before ones turn, struggling turns on who is to fetch first.
19	What are other negative effects of water scarcity in your community?	The pupils several at the search of drinking water had missed classes, which has led to absenteeism
20	How can the provision of borehole benefit your community?.	It reduces the stress in search of water, it reduces the risk of drinking contaminated water
21	What plans does your community have to maintain the borehole?	A committee will be in charge to supervise the use of the borehole, Padlock will be used to lock the borehole when necessary, security will be incharge to watch over the borehole.
		
	Well Management Committee:	Community members at source of water supply for the community

Community 8

1	Name of LGA	Ohaukwu
2	Name of village/community	Uzor-Onukpa Village UkwagbaNgbo

17	What are the possible contaminants of the water sources in your community?	Animal and human fecal deposits
18	What challenges/risks do people face at the source of water supply?	Snake bites, wastage of productive time waiting to get to ones turn to fetch water
19	What are other negative effects of water scarcity in your community?	Fighting each other especially children over water, unhygienic appearances by members of the community
20	How can the provision of borehole benefit your community?.	It will reduce the risk of contaminating water borne diseases, reduces time wastage and stress in search of water
21	What plans does your community have to maintain the borehole?	If the borehole is approved, members of the village executives will ensure that the surroundings are kept clean and also provide little logistics required to maintain it
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu L.G.A.
2	Name of village/community	NdiaguOgwuUkwaUkwagba, Ngbo
3	Proposed Location of the borehole	NdiaguOgwuUkwaUkwagba, Ngbo
4	Name/occupation/phone no. of proposed borehole manager	Elechi Sunday/ farming/ 08121467945 or 09095475954
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	305
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Well Pond, stream
8	How much quantity of water is required per household per day in your community?	60,000 litres
9	What is the name of the source of water supply?	Okpuru stream
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	By foot
11	How far/how long does it take to reach the source of water supply from your community?	2 kilometers
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and Youths
14	How long does it take to reach someone's turn at the source of water?	1hour
15	How long is the source of the water supply available in a year?	5months
16	What are the water-borne diseases suffered by members of your community?	Guinea worm, cholera, malaria, typhoid fever
17	What are the possible contaminants of the water sources in your community?	Animal droppings and human fecal deposits
18	What challenges/risks do people face at the source of water supply?	Time wastage due to the long distance , fights and quarrels
19	What are other negative effects of water scarcity in your community?	Spread of water borne diseases
20	How can the provision of borehole benefit your community?.	Provides safe water and reduces the spread of water borne diseases
21	What plans does your community have to maintain the borehole?	Committee will be in charge to watch over the borehole

5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	93
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Ogwuukwuagba river Njkobe stream
8	How much quantity of water is required per household per day in your community?	50 gallon
9	What is the name of the source of water supply?	Ogwuukwuagba river
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	By foot
11	How far/how long does it take to reach the source of water supply from your community?	45 minutes
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and children
14	How long does it take to reach someone's turn at the source of water?	30 minutes
15	How long is the source of the water supply available in a year?	For 9months
16	What are the water-borne diseases suffered by members of your community?	Cholera, Diarrhea
17	What are the possible contaminants of the water sources in your community?	Animal droppings and human waste
18	What challenges/risks do people face at the source of water supply?	Snake bites and long distance based on trekking
19	What are other negative effects of water scarcity in your community?	Inability to bath and wash cloths
20	How can the provision of borehole benefit your community?.	Reduces the risk of contacting water borne diseases, reduces stress and time wastage
21	What plans does your community have to maintain the borehole?	Setting up a committee that will be incharge of supervising the borehole
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu L.G.A.
2	Name of village/community	NduloUmusokeAmoffia, Ngbo

4	Name/occupation/phone no. of proposed borehole manager	Onwelfeanyi/ Farmer/ 09169340267
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	50 households
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Streams Ponds
8	How much quantity of water is required per household per day in your community?	20 gallons
9	What is the name of the source of water supply?	OgwuOchie stream
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	By Foot
11	How far/how long does it take to reach the source of water supply from your community?	About 45 minutes
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and youths
14	How long does it take to reach someone's turn at the source of water?	Maybe every 10 minutes
15	How long is the source of the water supply available in a year?	From May to October
16	What are the water-borne diseases suffered by members of your community?	Diarrhea, cholera
17	What are the possible contaminants of the water sources in your community?	Detergents from people washing close to the stream bank, fecal waste from community members
18	What challenges/risks do people face at the source of water supply?	Trekking a lengthy distance that may cause body pains
19	What are other negative effects of water scarcity in your community?	Increased spread of water borne diseases
20	How can the provision of borehole benefit your community?.	Reduces the spread of water borne diseases and reduces the risk of drinking contaminated water which may not be good to the health
21	What plans does your community have to maintain the borehole?	The village executives will provide security that will be incharge of supervising the borehole
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu
2	Name of village/community	AmaudoUmuoruAmaechi
3	Proposed Location of the borehole	Within our Village playground square
4	Name/occupation/phone no. of proposed borehole manager	OnweDonatus Ali/RTD Teacher/07087972423
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	258 Household
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Stream Water Stream Water
8	How much quantity of water is required per household per day in your community?	150 Liters
9	What is the name of the source of water supply?	Ishimkpuma Stream water
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	By foot
11	How far/how long does it take to reach the source of water supply from your community?	4 km
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and Children
14	How long does it take to reach someone's turn at the source of water?	2 and half hours
15	How long is the source of the water supply available in a year?	From April-Nov
16	What are the water-borne diseases suffered by members of your community?	Typhoid and Dysentery
17	What are the possible contaminants of the water sources in your community?	Animal droppings , chemicals applied by farmers , refuse
18	What challenges/risks do people face at the source of water supply?	Fighting, stress, gossiping and more
19	What are other negative effects of water scarcity in your community?	Water borne disease , it enhances unhealthy habits and Raid deaths
20	How can the provision of borehole benefit your community?.	It will reduce the rapid deaths, disease Like communicable disease
21	What plans does your community have to maintain the borehole?	Committee to man it will be place

11	How far/how long does it take to reach the source of water supply from your community?	5 kilometres
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and children
14	How long does it take to reach someone's turn at the source of water?	It takes 20 minutes
15	How long is the source of the water supply available in a year?	Five months
16	What are the water-borne diseases suffered by members of your community?	Guinea worm, Cholera
17	What are the possible contaminants of the water sources in your community?	Animal droppings and dumping of wastes into the water body
18	What challenges/risks do people face at the source of water supply?	Struggling of whose turn to fetch may result to fighting
19	What are other negative effects of water scarcity in your community?	Water borne diseases as a result of drinking contaminated water
20	How can the provision of borehole benefit your community?.	It will aid the provision of good and safe water for drinking, it will reduce the risk of villagers getting infected after drinking the stream water if contaminated
21	What plans does your community have to maintain the borehole?	The community executives will establish a committee that will be incharge of supervising the welfare of the borehole
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu L.G.A.
2	Name of village/community	NwandeguNduloOkposhiEheku, Ngbo
3	Proposed Location of the borehole	NwandeguNduloOkposhiEheku, Ngbo
4	Name/occupation/phone no. of proposed borehole manager	Adagba James Oge/ Civil servant/ 08037748252, 08154817894
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	100 households
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Ponds and streams during rainy season
8	How much quantity of water is required per household per day in your community?	Over 100 litres
9	What is the name of the source of water supply?	Okpuru stream
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	By foot
11	How far/how long does it take to reach the source of water supply from your community?	It takes 1hour
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and children
14	How long does it take to reach someone's turn at the source of water?	10 to 20 minutes
15	How long is the source of the water supply available in a year?	Mostly during the rainy season from February to October
16	What are the water-borne diseases suffered by members of your community?	Cholera, diarrhea
17	What are the possible contaminants of the water sources in your community?	Human wastes and detergents from people washing close to the stream bank
18	What challenges/risks do people face at the source of water supply?	Rape, fights
19	What are other negative effects of water scarcity in your community?	Spread of communicable diseases
20	How can the provision of borehole benefit your community?.	The stress of fetching water from distance will be reduced and improved health condition
21	What plans does your community have to maintain the borehole?	The managers will supervise the affairs of the borehole and the community members using the borehole will make some contribution that will be used to carter for the need when it arises
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu L.G.A.
2	Name of village/community	NdiaguOduma Village OkposhiEshi, Ngbo
3	Proposed Location of the borehole	NdiaguOduma Village OkposhiEshi, Ngbo
4	Name/occupation/phone no. of proposed borehole manager	Mr.Owo John/ Farming/ 08065582831
5	Name/occupation/phone no. of proposed borehole assistant manager	
6	What is the estimated population size/number of households of your community?	45 households
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Well Streams and ponds
8	How much quantity of water is required per household per day in your community?	60 litres
9	What is the name of the source of water supply?	Akpuodo ponds, Oguduedegbe ponds
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Trekking by foot, bicycles and motorcycles
11	How far/how long does it take to reach the source of water supply from your community?	5 to 10 kilometres
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and children
14	How long does it take to reach someone's turn at the source of water?	6 to 8 hours
15	How long is the source of the water supply available in a year?	From may to November
16	What are the water-borne diseases suffered by members of your community?	Guinea worm, typhoid fever, ring worm
17	What are the possible contaminants of the water sources in your community?	Human waste
18	What challenges/risks do people face at the source of water supply?	Fighting over turns, villagers are been attacked by people or mad men
19	What are other negative effects of water scarcity in your community?	Children usually go late to school due to the distance it takes to get water before going to school
20	How can the provision of borehole benefit your community?.	It will reduce the risk of water borne diseases, it will aid the presence healthy water within the village
21	What plans does your community have to maintain the borehole?	Locking up the borehole when necessary, the managers will help to supervise the borehole
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu L.G.A.
2	Name of village/community	AgbabaAmaeffiaAmeku, Ngbo
3	Proposed Location of the borehole	Village playground
4	Name/occupation/phone no. of proposed borehole manager	Egwu Samuel/ 0814571112
5	Name/occupation/phone no. of proposed borehole assistant manager	Ogba Stephen/08162229974
6	What is the estimated population size/number of households of your community?	400 households
7	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Stream Ponds
8	How much quantity of water is required per household per day in your community?	300 litres
9	What is the name of the source of water supply?	Ogwema Streams
10	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Bicycle and by foot
11	How far/how long does it take to reach the source of water supply from your community?	1 hour 30 minutes
12	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
13	Who are those that normally fetch water for household use in your community?	Women and Youth
14	How long does it take to reach someone's turn at the source of water?	About one hour
15	How long is the source of the water supply available in a year?	Rainy season only
16	What are the water-borne diseases suffered by members of your community?	Cholera, Tuberculosis, guinea worm
17	What are the possible contaminants of the water sources in your community?	Human waste and animal droppings
18	What challenges/risks do people face at the source of water supply?	Struggling turns which may result to fighting
19	What are other negative effects of water scarcity in your community?	Getting infected with water borne diseases which may impair villagers health
20	How can the provision of borehole benefit your community?.	Promotion of good water hygiene, improved health condition
21	What plans does your community have to maintain the borehole?	We will set up monitoring group to guard the activities of the concerning the borehole and ensuring security

17	What challenges/risks do people face at the source of water supply?	Falling
18	What are other negative effects of water scarcity in your community?	Dirty, rape
19	How can the provision of borehole benefit your community?.	Neatness
20	What plans does your community have to maintain the borehole?	Management committee
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu
2	Name of village/community	Ndiegu eze effuterekwe okposhi eheku ngbo
3	Proposed Location of the borehole	Any where in the village
4	Name/occupation/phone no. of proposed borehole manager	07060995952
5	What is the estimated population size/number of households of your community?	700
6	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Rain Pond
7	How much quantity of water is required per household per day in your community?	50ltrs
8	What is the name of the source of water supply?	Pond
9	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot
10	How far/how long does it take to reach the source of water supply from your community?	150km
11	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
12	Who are those that normally fetch water for household use in your community?	Females,
13	How long does it take to reach someone's turn at the source of water?	5hrs
14	How long is the source of the water supply available in a year?	5months
15	What are the water-borne diseases suffered by members of your community?	Guinea worm
16	What are the possible contaminants of the water sources in your community?	Open defecation
17	What challenges/risks do people face at the source of water supply?	Kidnap, rape
18	What are other negative effects of water scarcity in your community?	Domestic activities
19	How can the provision of borehole benefit your community?.	Use of good water
20	What plans does your community have to maintain the borehole?	Care taker committee
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu
2	Name of village/community	Otuba village ekwashi ngbo
3	Proposed Location of the borehole	Otuba village
4	Name/occupation/phone no. of proposed borehole manager	Ogbonnaya, 07060585594
5	What is the estimated population size/number of households of your community?	500
6	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Pond Well
7	How much quantity of water is required per household per day in your community?	14barels
8	What is the name of the source of water supply?	Ogbaiyi akpu pond
9	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot, bicycle
10	How far/how long does it take to reach the source of water supply from your community?	2miles
11	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
12	Who are those that normally fetch water for household use in your community?	Children, women.
13	How long does it take to reach someone's turn at the source of water?	2hrs
14	How long is the source of the water supply available in a year?	8months
15	What are the water-borne diseases suffered by members of your community?	Cholera, other water born diseases
16	What are the possible contaminants of the water sources in your community?	Animals
17	What challenges/risks do people face at the source of water supply?	Wild animal attack
18	What are other negative effects of water scarcity in your community?	Water born diseases contamination
19	How can the provision of borehole benefit your community?.	Eradicate water born diseases
20	What plans does your community have to maintain the borehole?	Proper supervision, maintenance
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu
2	Name of village/community	Eguigba umuoguduosha
3	Proposed Location of the borehole	Ebenezer methodist church,
4	Name/occupation/phone no. of proposed borehole manager	Rev. Christain ogbonna, 08138312007
5	What is the estimated population size/number of households of your community?	345
6	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Pond Stream
7	How much quantity of water is required per household per day in your community?	1200
8	What is the name of the source of water supply?	Nwogba pond
9	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot
10	How far/how long does it take to reach the source of water supply from your community?	2km
11	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Acceptable
12	Who are those that normally fetch water for household use in your community?	Children, adults
13	How long does it take to reach someone's turn at the source of water?	1hr
14	How long is the source of the water supply available in a year?	Reduce during dry saeson
15	What are the water-borne diseases suffered by members of your community?	Cholera
16	What are the possible contaminants of the water sources in your community?	Washing of clothes
17	What challenges/risks do people face at the source of water supply?	Stress of standing for too long
18	What are other negative effects of water scarcity in your community?	Waking up early
19	How can the provision of borehole benefit your community?.	Reduce water born diseases
20	What plans does your community have to maintain the borehole?	Set committee
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu
2	Name of village/community	Ndiagu ette okposhi eheku ngbo
3	Proposed Location of the borehole	Village play ground
4	Name/occupation/phone no. of proposed borehole manager	Agwu Obinna, 08053637600
5	What is the estimated population size/number of households of your community?	350
6	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Stream Pond
7	How much quantity of water is required per household per day in your community?	500ltrs
8	What is the name of the source of water supply?	Onuominyi stream
9	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot, bicycle
10	How far/how long does it take to reach the source of water supply from your community?	15km
11	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
12	Who are those that normally fetch water for household use in your community?	Women, children
13	How long does it take to reach someone's turn at the source of water?	1hr
14	How long is the source of the water supply available in a year?	Rainy season
15	What are the water-borne diseases suffered by members of your community?	Cholera, guinea worm
16	What are the possible contaminants of the water sources in your community?	Leaves falling from plants
17	What challenges/risks do people face at the source of water supply?	Fight,
18	What are other negative effects of water scarcity in your community?	Diseases and infection
19	How can the provision of borehole benefit your community?.	Access to good water
20	What plans does your community have to maintain the borehole?	Rutting check
		
	Well Management Committee:	Community members at source of water supply for the community

1	Name of LGA	Ohaukwu
2	Name of village/community	Onweori village
3	Proposed Location of the borehole	Village area
4	Name/occupation/phone no. of proposed borehole manager	Onwe samuel, businessman 08032590466
5	What is the estimated population size/number of households of your community?	450
6	What is the main source of water supply in your community? (i). For drinking. (ii). For domestic use	Stream Stream
7	How much quantity of water is required per household per day in your community?	6000ltrs
8	What is the name of the source of water supply?	Ogbuite stream
9	How does majority of the community members get to the source of water supply? vehicle, motorcycle, bicycle, foot:	Foot
10	How far/how long does it take to reach the source of water supply from your community?	3km
11	How is the quality of the water? Excellent, good, acceptable, unacceptable:	Unacceptable
12	Who are those that normally fetch water for household use in your community?	women
13	How long does it take to reach someone's turn at the source of water?	1hr
14	How long is the source of the water supply available in a year?	April to December
15	What are the water-borne diseases suffered by members of your community?	Cholera
16	What are the possible contaminants of the water sources in your community?	Animal waste
17	What challenges/risks do people face at the source of water supply?	Fight
18	What are other negative effects of water scarcity in your community?	Rape, drought, dysentery
19	How can the provision of borehole benefit your community?.	Reduce water born diseases
20	What plans does your community have to maintain the borehole?	Form Well Management Committees
	 	
	Well Management Committee:	Community members at source of water supply for the community

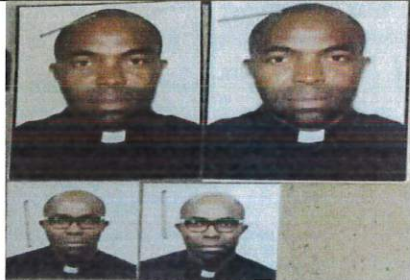

1	Name of LGA	Ebnoyi
2	Name of village/community	Ndiogodo aba
3	Proposed Location of the borehole	Azuokpuru
